

Vapor Recovery Units

Vapor Vapor Recovery Units (VRU) can be an integral part of your 'Quad O' compliance program. Many hydrocarbon gases will re-condense to liquid form once compressed and cooled. Understanding the natural laws and field installation experience are critical to system reliability.

DXP provides engineering and manufacturing solutions for environmental and vapor recovery challenges. We utilize full CAD design and drafting capabilities; Section VIII, Division I and ASME Code VIII welding facilities; and maintain state-of-the-art fabrication facilities.

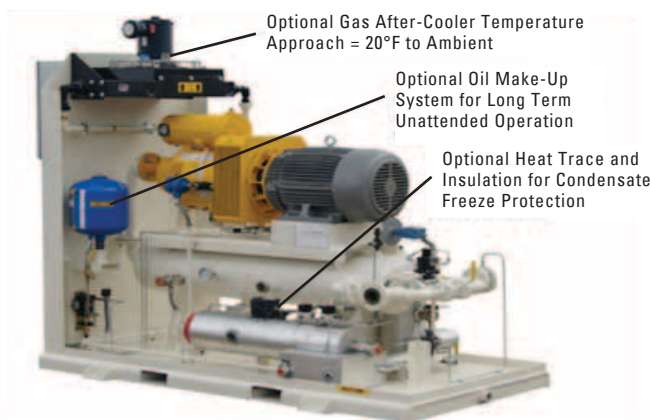

DXP utilizes innovatively engineered products to ensure the safe handling and transfer of hydrocarbon gases and liquids.

DXPBRU

Single-Stage Reciprocating Compressor

27 - 50 MSCFD
<70 psig

DXPMRU

Lubricated Rotary Vane Compressor

120 - 2,500 MSCFD
<50 psig

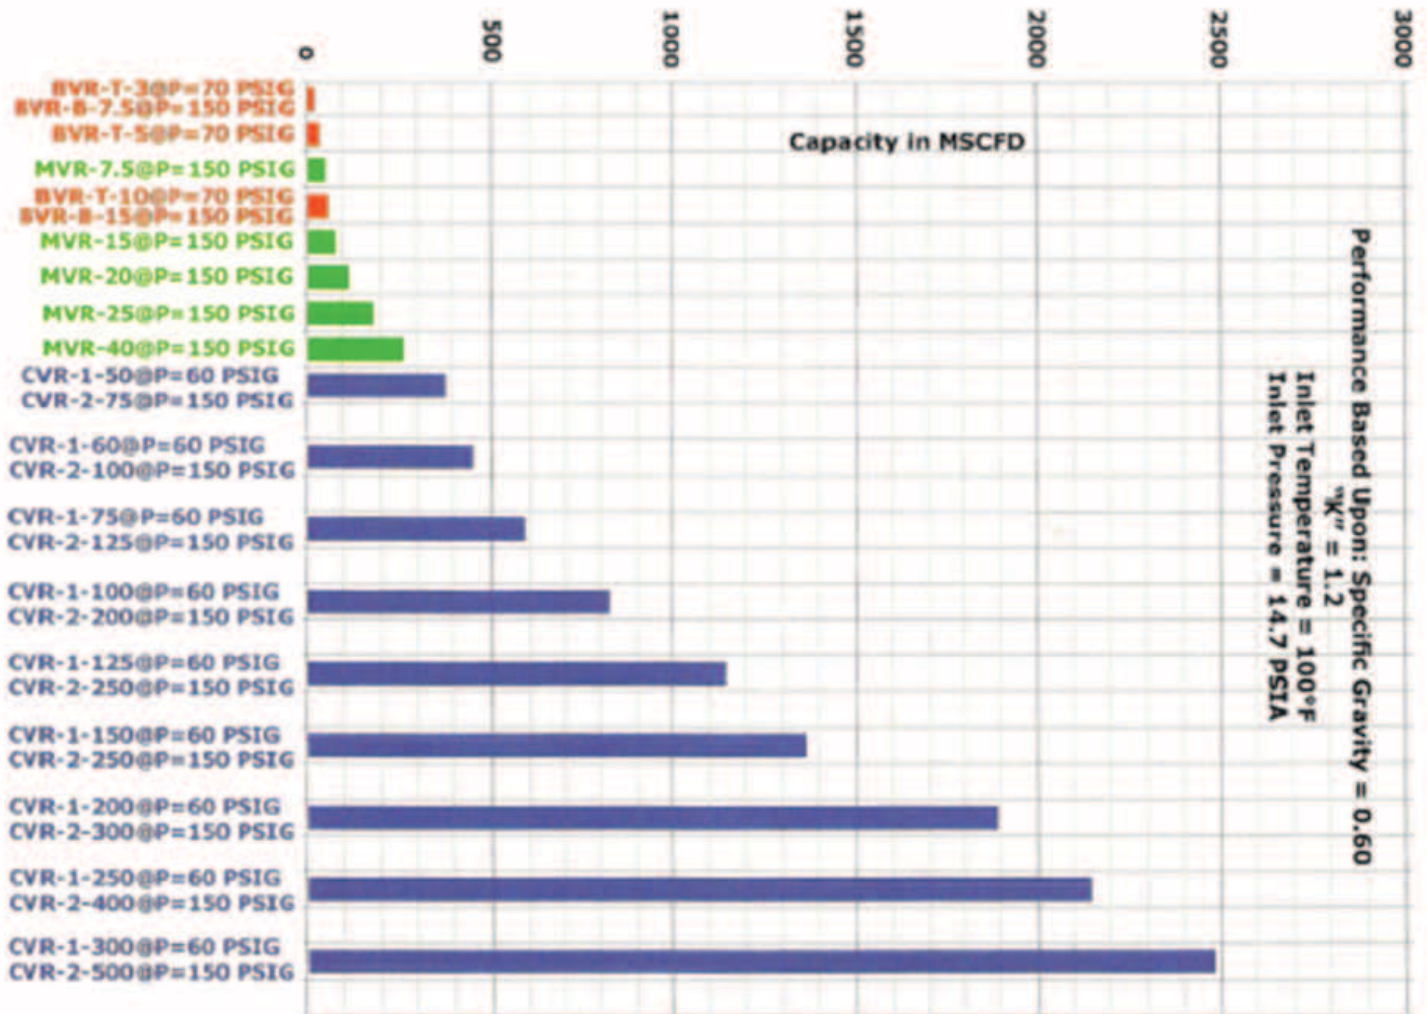

DXPC1RU

Single-Stage Rotary Vane Compressor

2,500 MSCFD
<50 psig

VRU Capacity

DXP Enterprises

DXP is a publicly-traded distribution company that provides bearings & power transmission, industrial, metal working, rotating equipment and safety products and services to a variety of industries. As The Industrial Distribution Experts, DXP is committed to providing our customers with product expertise, technical service and supply chain management.
