

## Transform Your Business with INTEGRATED SUPPLY CHAIN MANAGEMENT

Over the years, DXP has provided clients with supply chain services backed by user-friendly software tools and streamlined enterprise processes. As a result, we're able to deliver cost savings to our clients through custom-tailored solutions implemented by an experienced team of supply chain consultants.

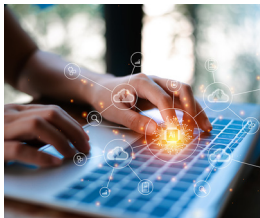

### STOREROOM & INVENTORY MANAGEMENT

A well-established and effective storeroom and inventory management program can help your organization maintain optimum levels of operational efficiency, reduce costs, and improve overall business. DXP will help you transform what is no longer manageable, readable, or too time-consuming in your supply chain and present you with informed solutions. We have decades of experience assisting customers to achieve their supply chain goals and increase their bottom line.

### PROCUREMENT MANAGEMENT

Procurement management makes it easier for businesses to maintain relationships with suppliers, manufacturers, and distributors at each point in the procurement process. When you partner with DXP, we deliver industry-leading procurement and supply chain management services to improve your bottom line.

### MRO ANALYTICS & DATA ENHANCEMENT

While businesses today recognize the necessity of shifting from traditional MRO management to digital solutions, the road map is often unclear. Navigating this transition can be confusing amidst a plethora of vendors offering partial solutions. DXP is the only procurement analytics solutions company that can pair technical product knowledge with data master creation/enhancement, along with the management systems and spend analytics to drive real value for your MRO Supply Chain.

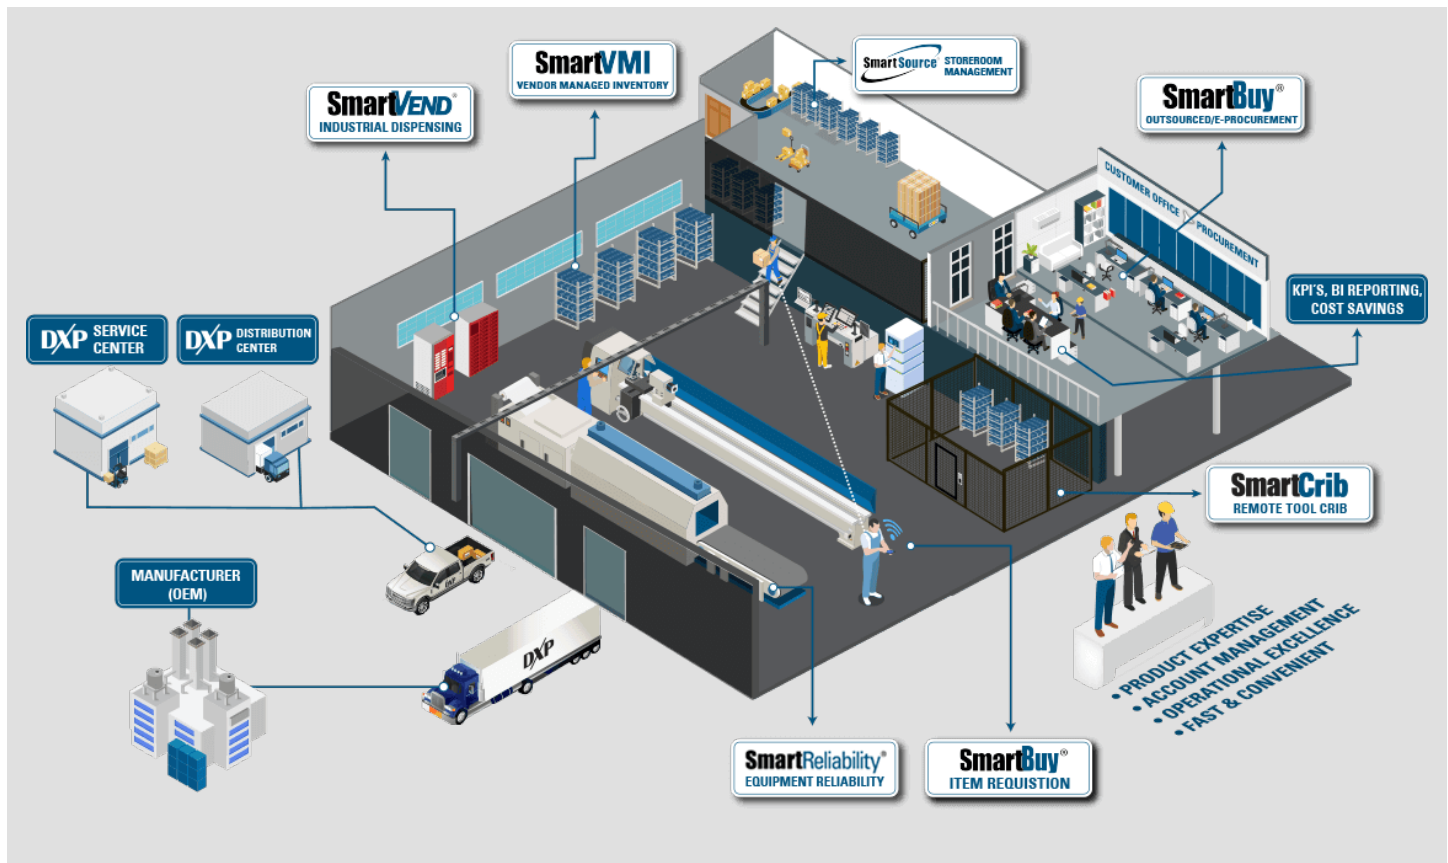

## STREAMLINE YOUR SUPPLY CHAIN MANAGEMENT

DXP's primary mission is to help our customers rise above the competition. We've spent years developing master plan templates and assessment tools to streamline operations while removing excess costs from supply chain management processes.

#### Applications of this proven approach include:

- Developing enterprise-wide inventory and procurement
- Reducing pure costs of indirect materials
- Identifying trends and trouble-shooting for plant operations
- Data mining to optimize purchasing decisions

# DXP SmartSolutions® programs transform organizations by taking an innovative approach to supply chain inventory management.

## SmartServ®

Integrated service solution providing a more efficient way to manage the entire lifecycle of your equipment.

## SmartCMMS®

Simple solution for work order management, inventory control and preventive maintenance.
