

CONTROLS & AUTOMATION

At DXP, we understand the importance of optimizing the performance of your rotating equipment.

Our Controls Engineers are ready to collaborate with you to design customized solutions to automate and control the process while providing advanced machine protection, improving efficiency and increasing safety. We provide the latest technologies paired with over 115 years of pump hydraulic expertise using advanced control systems and integrated software.

ADVANCED CONTROL SYSTEMS

From simple control panels to custom designed systems with VFDs, PLCs and HMIs; our advanced control systems provide you with the capability to monitor and control processes from a single interface. Our systems allow you to measure, monitor and control pressure, temperature, and levels, as well as provide information about the process to SCADA. Our integrated software allows you to keep track of all the data collected from the system and make changes quickly and easily.

AUTOMATION

Automation of process controls reduces the risk to rotating equipment typically caused by operator error. With DXP, you can be confident that your processes are running smoothly and reliably, allowing you to focus on other areas of your business. Our automation solutions are designed to be cost-effective, allowing you to save money while still improving the process.

TRAINING & SUPPORT

DXP also offers comprehensive training and support. Our staff can provide you with the skills and knowledge you need to operate your automation system with confidence. We can also provide maintenance and troubleshooting services. Our team of Controls Engineers are ready to work with you in all phases of the operation.

PREFERRED VENDORS

Franklin Electric

Using DXP as a single supplier for your business needs will save you time and money. Streamline your purchasing process and reduce costs so you can focus on other aspects of your business.

Automated Processes

There are many automation companies out there that can do a good job, but do they understand the intricacies of dynamic hydraulic principles?

Optimized Performance

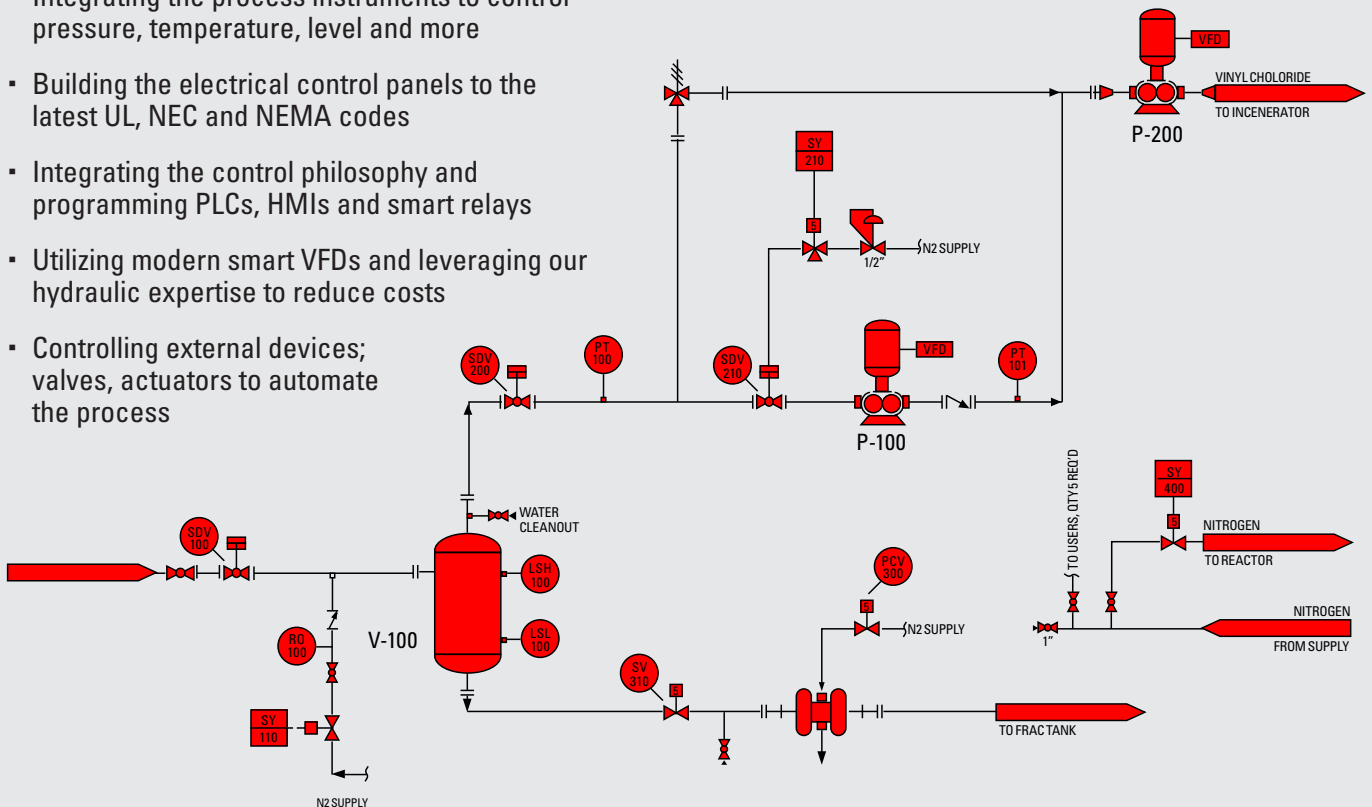

By fundamentally understanding your process, DXP can provide a cost-effective solution to maximize efficiency while protecting the equipment from premature failure.

The X is for Expert

Who better than the OEM of the equipment to control and automate your process? Leverage over 115 years of rotating equipment expertise within one supplier.

PROCESS CONTROLS

- Integrating the process instruments to control pressure, temperature, level and more
- Building the electrical control panels to the latest UL, NEC and NEMA codes
- Integrating the control philosophy and programming PLCs, HMIs and smart relays
- Utilizing modern smart VFDs and leveraging our hydraulic expertise to reduce costs
- Controlling external devices; valves, actuators to automate the process

WHY DXP

- **Single-source partner and accountability**
- **National presence, local support**
- **Reduced downtime, maximized pump performance**
- **Integrated automation needs from pump experts**
- **Pump protection from common upsets**
