

SmartCrib

DXP provides a total comprehensive inventory management solution to monitor your storeroom remotely, wherever you are. This allows plants to continue daily operations, providing security and accuracy.

BENEFITS

END USER SELF-SERVICE

SECURE STOCKROOM ACCESS

INVENTORY ACCURACY (SHRINKAGE REDUCTION)

AUTOMATED CAPTURE OF ITEM ISSUES

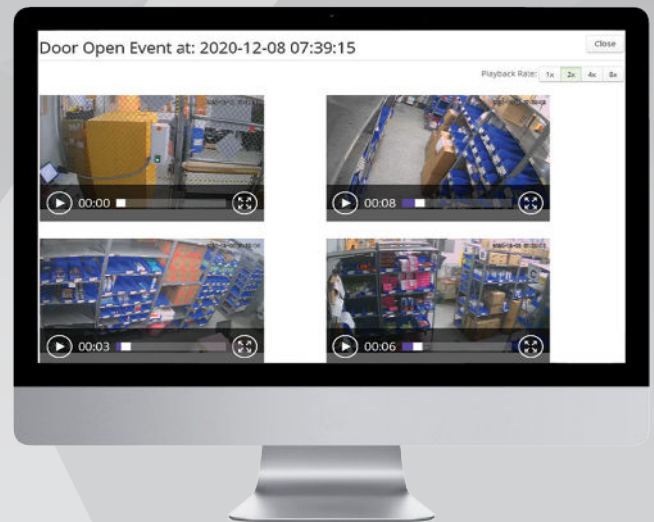

REMOTE OPERATIONS

REMOTE MONITORING & VIDEO CONFIRMATION

Remote Storeroom Management

BELOW ARE TWO SCENARIOS WITH DXP SMARTCRIB SOLUTIONS THAT CAN BE COST-EFFECTIVELY IMPLEMENTED.

SCENARIO #1

You have a **manned** storeroom that supplies needed items to shop floor employees.

HOW IT WORKS:

1. Employee logs into the storeroom site via an internet-connected device (laptop, iPhone, iPad, etc.)
2. Employee begins a new order, selects all items needed, and adds the items to the order.
3. The order is transmitted to the storeroom, where the storeroom attendant receives the order, pulls the items, and arranges to have them transferred to the requesting employee.

SCENARIO #2

You have an **unmanned** storeroom that supplies needed items to shop floor employees.

HOW IT WORKS:

1. Employee gains access to the secure storeroom by badging-in via the badge reader at the entry door.
2. Employee uses the bar code scanner, phone app, or tablet, etc. to "shop" in the storeroom by selecting items needed and scanning them, one-by-one, which checks out the items to the employee.
3. Once complete, the employee logs out, exits the storeroom with the items, and returns to work with needed items.

Both solutions provide a complete conversion for a storeroom—a secure magnetic door lock, badge access door entry, 4 monitoring cameras, and a bar code scanner to checkout.
